

## Case Study

IP Ownership + Continuity of Information  
 Project: Adelaide Airport Terminal Expansion  
 Client: Adelaide Airport

With the advent of the COVID-19 pandemic, industries around the world have faced unprecedented challenges. None more so than the aviation industry.

TCPinpoint was engaged to manage the tenancy delivery across the Adelaide Airport Terminal Expansion project (TEEx) using our tenancy delivery platform. With the advent of the global pandemic and the subsequent effects on the project, the Client was driven to bring the tenancy delivery in-house.

Subsequent to moving through the handover process, the internal tenancy delivery team observed how easy and transparent the TCPinpoint platform was with the sharing of information. They are now armed with a strong understanding of historical information but also an understanding of a consistent process to follow for future tenancy delivery.

TCPinpoint has ensured the IP remains with the client and is not lost with a change of personnel.

Sarah Kirkwood, Head of Project Delivery at Adelaide Airport, indicated:

“Despite the current downturn in Aviation we were pleased to support the ongoing application of TCPinpoint’s tenancy delivery software system to ensure continuity of knowledge and consistency in our project delivery processes.”

### Desired Outcomes achieved:

- IP retained by the client
- Transfer of information from consultant team to client team achieved within an hour
